

## Watershed discretization

Posted by BoyC - 2008/02/29 22:07

---

When I try to create the individual planes and channels for the simulation in Tutorial 1 I get the following error when running the ws.watershed.generate script....."grid object does not recognize request streamtopolylineftab". Can anyone help?

Shawn

Hi Shawn,

We'll need a little more information to figure this out. Here are some things to check.

Do you have the latest version of Spatial Analyst (2.0)?

Did you set everything up exactly as the Tutorial shows?

Did your watershed outline look like the example in the Tutorial?

Please try running through the Tutorial one more time and let us know your results.

Thanks,

Lainie

Hi Laine,

I believe the problem is that I am using Spatial Analyst (1.0a). I just checked the software requirements..Thanks for the help.

Shawn
